

# *Octávio Frias de Oliveira Bridge*

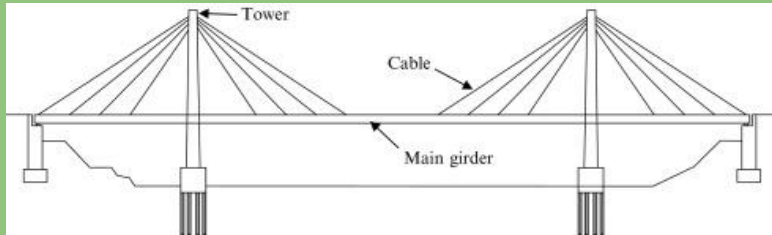

*Alyssa Hargis*

# How it works

Oliveira Bridge is a cable stayed bridge, cable stayed bridges have lots of heavy metal cables that connect from a tower to the platform that cars drive across to hold it up. Cable stayed bridges usually have 2 towers holding up a half of the bridge.

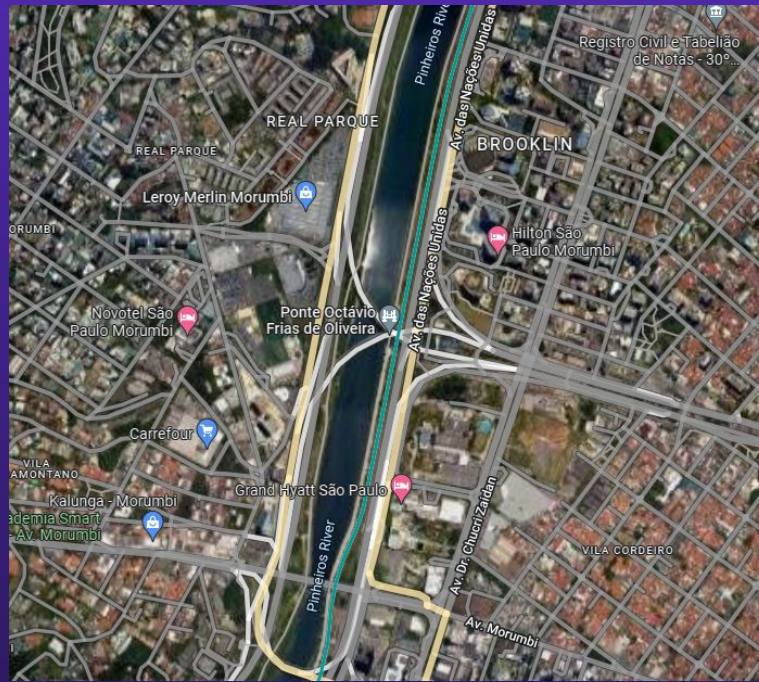

In 2011 thieves stole 3.6 miles of cable worth \$117,000!

Later in August 2011 vandals broke into the control room of the bridge and destroyed the panels.

Again, in 2012 the bridge got attacked. Vandals stole 94 of the 142 searchlights. It took 90 days and 250,000 Dollars to re-establish the lighting system.

Oliveira Bridge is located in São Paulo, Brazil.

This is a map of the bridge and the surrounding area in Sao Paulo.

### Fun Facts

Oliveira Bridge is very easy to misspell as “Olivera” or “Oliveiria” or Olivira”
